WARNER POWER INTRODUCES NEW DIGITAL BALLAST

WARNER, New Hampshire - Warner Power Conversion (Warner), based in Warner, New Hampshire, is a highly respected specialty designer and manufacturer of electronic ballasts and power supplies for applications in medical fiber optics, uv curing, entertainment lighting, and specialty lighting.

Warner's new **Smart Ballast**; a digital ballast featuring digital control, memory features and advanced prognostics, is a feature-rich, digitally-controlled ballast using latest generation microprocessor and memory. This ballast is soft-customizable for medical, dental, instrumentation, industrial and specialty lighting applications. It is fully enclosed, has integral cooling, power factor correction (PFC), and automatic line voltage sensing and EMI filters. This ballast has 25% lower energy losses compared to current models, has selectable auxiliary power outputs for external equipment and is fully RoHS Compliant. The Smart Ballast uses Surface Mount Technology (SMT) components to the greatest extent possible, for enhanced reliability.

All Warner Power ballasts feature rugged physical construction in a small footprint, high-energy conversion efficiency and a tolerance for unpredictable operating environments. Their wide input voltage and frequency range makes them the world wide solution.
